

43720 Trunk Weatherstrip

Thank you for purchasing our trunk weatherstrip material. We are confident that you will find this weatherstrip to be the highest quality, concurs correct, trunk seal available.

Installation:

To prepare the seal for installation, open the slot by inserting your finger into the slot, and slide it along the length of the seal.

The trunk weatherstrip is attached to the underside of the trunk lid with the slot opening toward the center of the lid as shown in the sketch below. The generally accepted concour rule has the seam on the driver's side at the midpoint of the trunk lid. Do not stretch the material as you install it. You will find that there is more than enough material provided and it will be necessary to trim the excess. Use any good grade of weatherstrip adhesive and follow the manufacturer's instructions. If you have any questions or comments please call our technical assistance line at 740/622-9700.
