

Part #53038B

## Foam – Soft Top Header

USE WITH ONE PIECE HEADER STAINLESS

The foam is designed to fit on top of the front header to eliminate gaps between the header stainless and the top covering material.

This foam provides fullness behind the stainless and professional looking job.

Position the foam on the header as shown – note the taper is toward the rear.

When properly installed the taper will start approximately 1/8" behind the header stainless.
